

In order to connect to a SharePoint site with an email account external to the domain hosting the site, you will need to follow these steps.

In your email client, locate the Welcome Email for the new SharePoint site and open it.

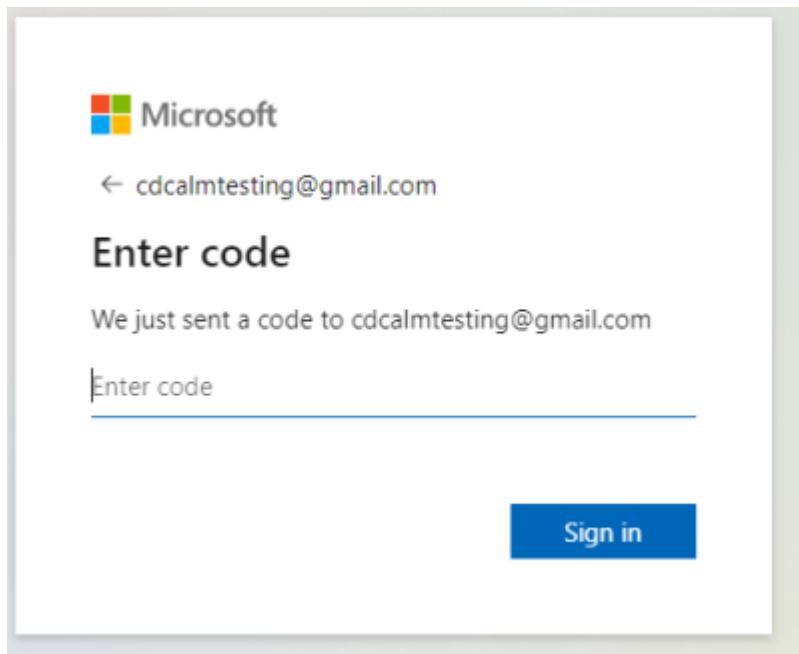

Use the email account you have used for the group to sign in with.

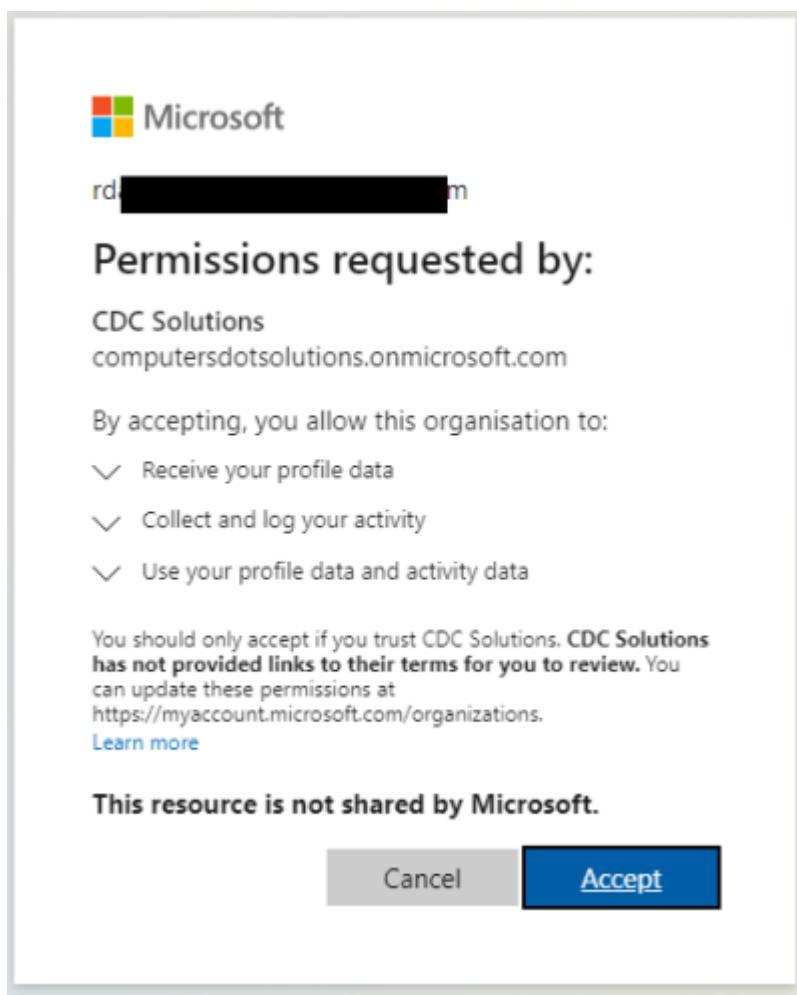

If this email account is an existing Microsoft email account, go ahead and use your current password for that email.

If this email account is NOT an existing Microsoft email account, if you are presented with a password, click the link to send a code, otherwise, Microsoft should send a one time code to the email address you are using.

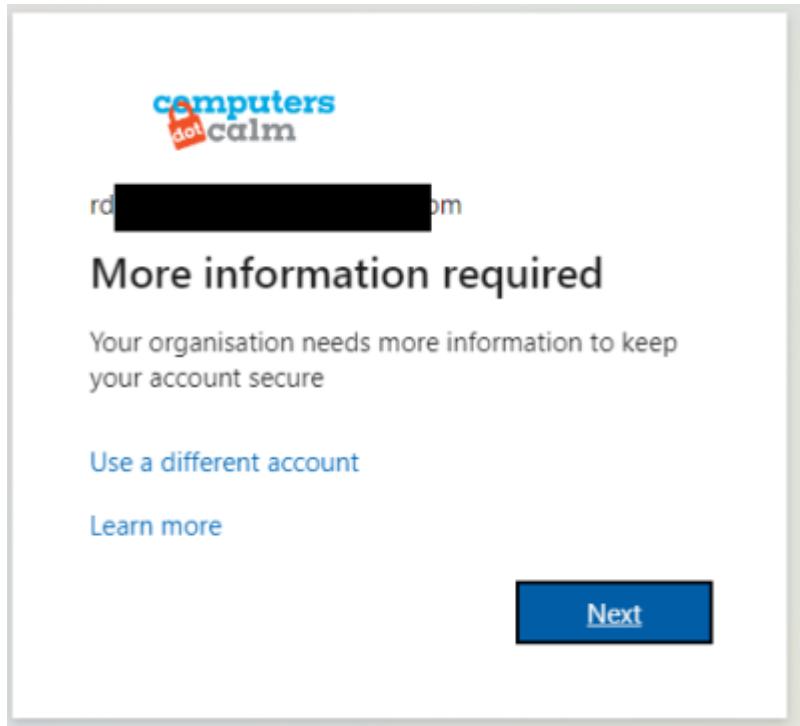

Once you receive the code, enter it in the space provided.

In both cases, once you have logged in successfully, you will be asked to accept the Permissions for the site.

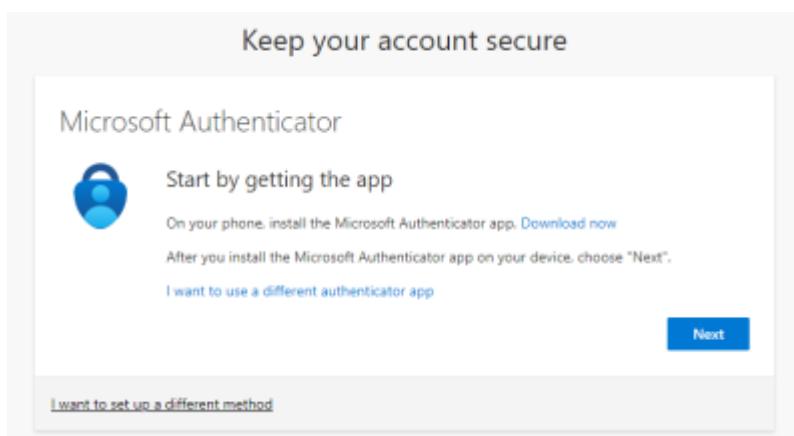

click the **Accept** button to continue.

The screenshot shows a web page with the 'computers dot calm' logo at the top. Below the logo, a redacted URL is visible. The main heading is 'More information required'. A subtext message reads: 'Your organisation needs more information to keep your account secure'. Below this, there are two links: 'Use a different account' and 'Learn more'. A large blue 'Next' button is centered at the bottom of the page.

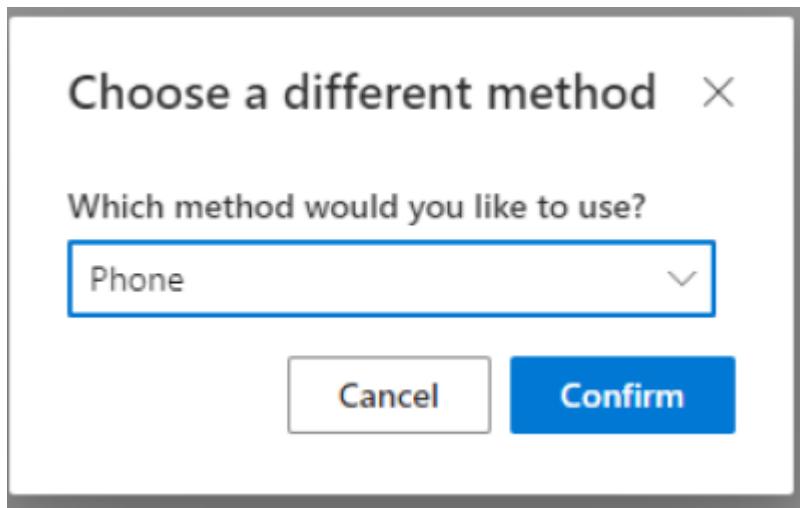

Click the **Next** button to continue to setup up 2FA/MFA for the site.

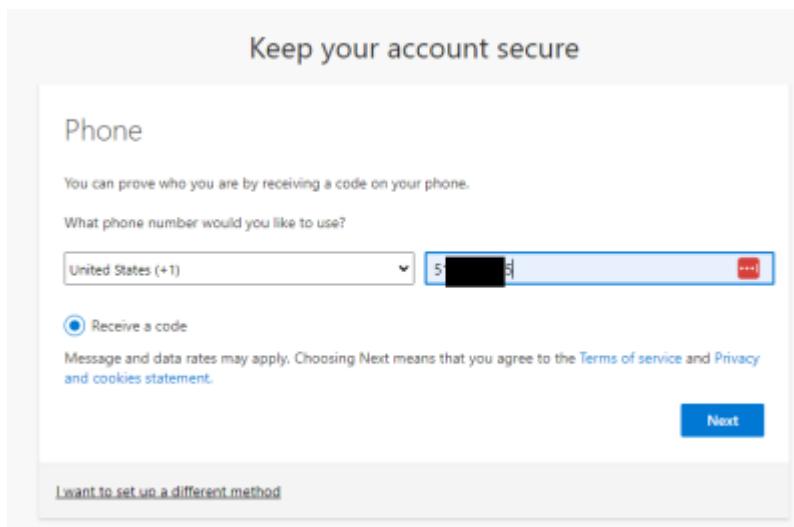

The screenshot shows a 'Keep your account secure' page for Microsoft Authenticator. It starts with the heading 'Microsoft Authenticator' and a 'Start by getting the app' section. It includes a blue user icon, instructions to download the app, and a note about choosing 'Next' after installation. Below this, there is a link 'I want to use a different authenticator app' and a large blue 'Next' button. At the very bottom, there is a link 'I want to set up a different method'.

If you already have Microsoft Authenticator setup on your mobile device, go ahead and use it. If you have another MFA app setup like LastPass, click the **I want to use a different authenticator app** link and set it up using that wizard. As a refresher, you can use the link for <https://wiki.computersdotcalm.com/doku.php?id=microsoft:add-lastpass-mfa> on this site on how to do that. If you have neither setup, click the link for **I want to set up a different method** at the bottom of the form to use your cell phone for authentication.

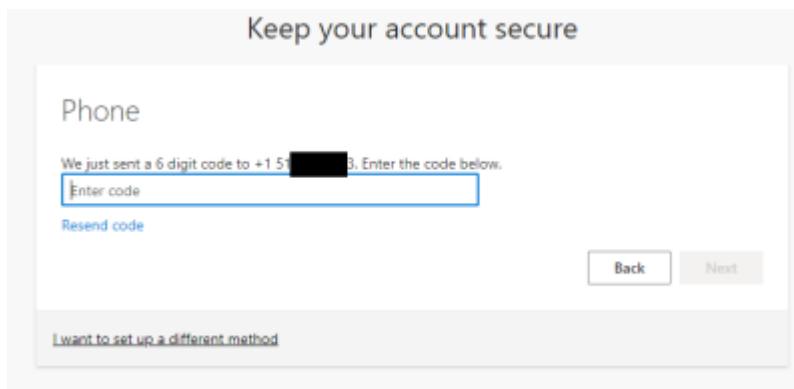

If you will be using just your cell phone for the authentication instead of a MFA app, once you click the **I want to set up a different method** link, you will be asked what method to use.

Change the drop down to **Phone** and then click the **Confirm** button to continue.

Enter in your phone number in the space provided and then click the **Next** button to continue.

Once you receive the code on your phone, go ahead and enter it in the space provided and the click the **Next** button to authenticate.

Keep your account secure

Phone

Verification complete. Your phone has been registered.

Next

When successful, click the **Next** button to continue.

Keep your account secure

Success!

Great job! You have successfully set up your security info. Choose "Done" to continue signing in.

Default sign-in method:

Phone
+1 555-123-4567

Done

Click the **Done** button to continue to the SharePoint site.
